

VulnoCyn® Spray

Skin, wounds, hoof and claw spray for small animals, horses and livestock

For wounds, skin injuries and cuts, skin irritations, insect stings and tick bites, as well as bacterial or fungal hoof and claw diseases

HOCL technology

Produced by a protected process.

- Effective against bacteria, viruses and fungi
- Painless and does not sting
- Free from antibiotics and alcohol
- Very well tolerated by the skin
- pH-neutral

Ingredients:

Active chlorine released from hypochlorous acid <0.1 g/100 ml, water, sodium chloride

Application skin — wounds and skin irritations (e.g. in the inter-thigh region of the cow)

Expose the affected areas and spray generously with **VulnoCyn® Spray**. Also ideal in combination with a bandage – moisten it with **VulnoCyn® Spray** and then apply the dressing. Repeat the application several times a day.

Can be used on all animals of any age.

Application hooves and claws

Solution for rinsing and disinfecting hooves and claws.

Before use, carefully clean the affected areas with a hoof pick. Then rinse the hoof/claw by spraying it generously with **VulnoCyn® Spray**. Allow the solution to take effect; no drying or rinsing off necessary.

Ideal in combination with **VulnoCyn® Hydrogel**: One to two minutes after rinsing, the affected areas are sprayed with **VulnoCyn® Hydrogel**. The hydrogel adheres excellently and can develop its effect over a longer period – this helps prevent new and secondary infections.

Safety instructions:

Use biocides safely. Always read the label and product information before use.

Store at room temperature and protect from direct sunlight.

For external use only. In case of eye contact, rinse with plenty of water. Dispose of completely emptied containers with household waste.

Use within 3 months after opening.

Complies with the anti-doping rules of the FEI and the FN (ADMR)
